

At Label Expo Europe 2023, we presented six amazing innovative equipment for high-end printing and converting as well as finishing and embellishment of self-adhesive labels.

The attendees interested in our technology visiting our booth were above our expectations.

In addition, CARTES was the winner as world's best technological innovation at the Label Industry Global Awards 2023 for its fully automated end-to-end digital finishing line, which integrates Jet D-Screen digital finishing with tool-less metallic doming and LASER converting.

Receiving this award has been a terrific satisfaction, a recognition of years of passion and hard work done by a great staff which is truly much more than a team, is a wonderful family.

A dream pursued hardly without ever wavering or giving up, an achievement that belongs to all the amazing people who have written and every day write the history of CARTES.

Thanks to everyone...!
